Business problem

Data source and cleaning

Data analysis - Tableau

Analytic findings and recommendation

# **BUSINESS PROBLEM**

Utilizing existing data, we aim to predict a proper annual premium for customers. While providing affordable insurance, it is important to predict the premiums accurately to avoid company loss.

# DATA SOURCE

Data set:

<https://www.kaggle.com/datasets/harshsingh2209/medical-insurance-payout>

Data Cleaning

Dataset was checked for “NULL” fields and removed

Data Preparation

Grouping were created to enable easier categorizing

Average charges based on Region

# SEX VS CHARGES

Total sum of charges based on Smoker or Non-Smoker/ Sex

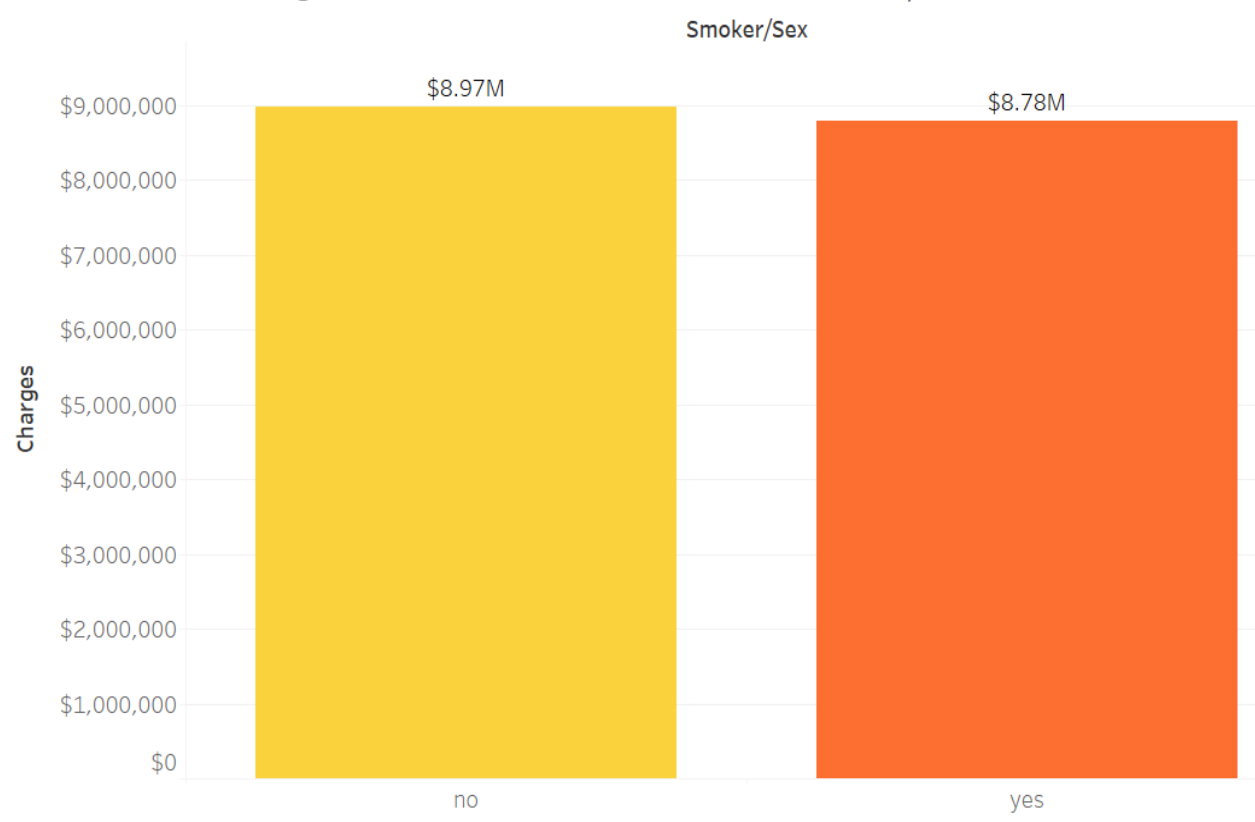

Average charges based on Smoker or Non-Smoker/ Sex

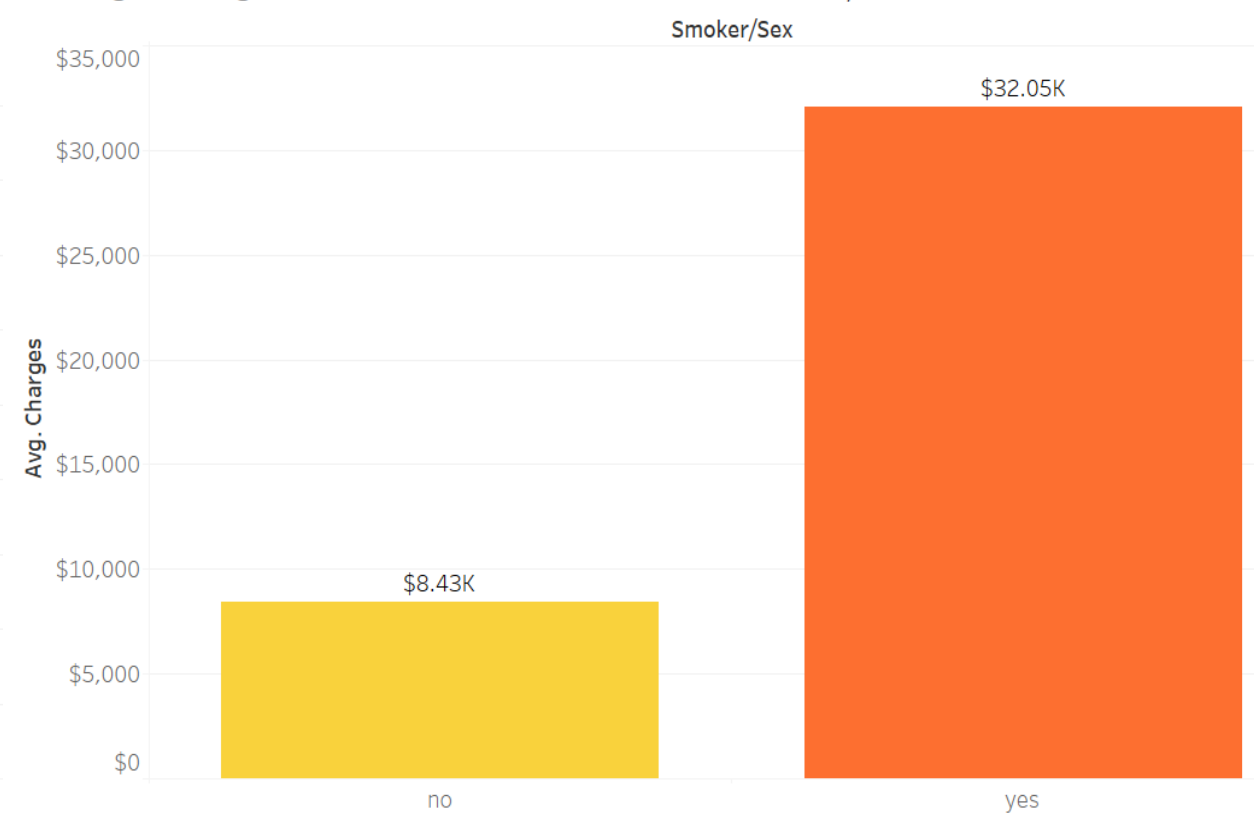

# SMOKER/NON-SMOKER VS CHARGES

Total sum of charges based on Smoker or Non-Smoker/ Sex

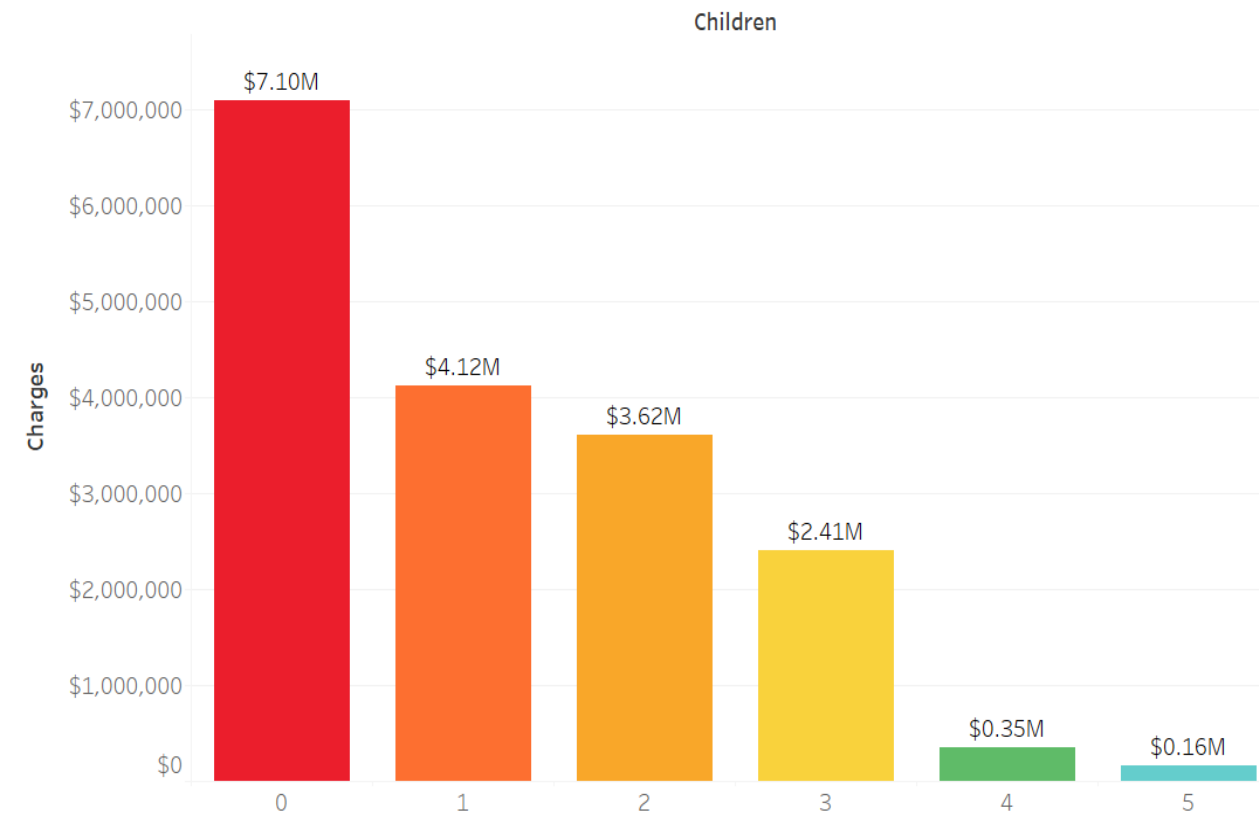

Average charges based on Smoker or Non-Smoker/ Sex

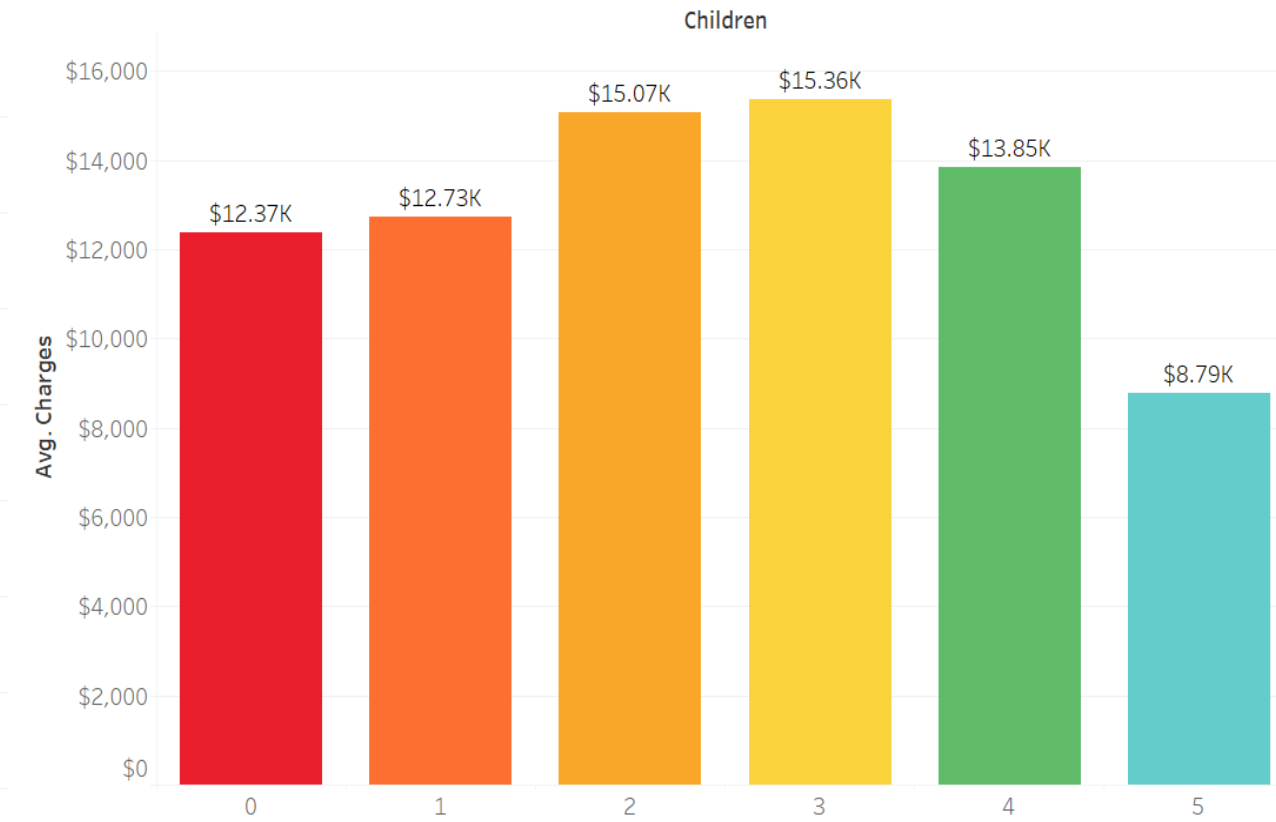

# NO. OF CHILDREN VS CHARGES

Total sum of charges based on No. of children

Average charges based on No. of children

# BMI VS CHARGES

Total sum of charges based on BMI

Average charges based on BMI

# ANALYTIC FINDINGS

Looking at both the total sum and the average charges of medical charges for each customer demographics (Age, Region, Sex, Smoker/Non-Smoker, No. of children and BMI)

Findings:

Age: Charges increases as the age of the customer increases

Regions: Highest charges incurred are by those who reside in the east regions.

Sex: Female customers incurred more charges compared to Male customers.

No. of children: The average charges were incurred the most by parents with 3 and 2 children.

BMI: Highest sum of charges were incurred by those with BMI= Obese. While the highest average charge was incurred by BMI= Extremely obese.

# RECOMMENDATIONS

From the analysis (refer to dashboard SUM and AVG) it can be seen that the SEX of the customer plays a significant role in charges incurred. Therefore this can be kept in mind when determining future premium rates.

The company can consider increasing future premiums for customers who are aged >40, male, smokers, customers who reside in the east of US and those who have a BMI of Overweight and more.

For those with children, further investigations would be required to determine premium rates.
